Together, let's invent tomorrow!

Driving a regional development

UTTOP contributes to the development of its region by training future professionals and engineers, fostering innovation, and working closely with businesses and public stakeholders to address technological, industrial and societal challenges.

Environmental transitions

The industrial, construction and transport sectors are facing environmental challenges. Reducing their impact is becoming a priority. UTTOP is committed to this issue through three major areas of focus: the study and promotion of low impact materials, energy efficiency and sustainable mobility.

Innovation and industrial transformation

Industry has entered a new revolution. Digitalisation, robotisation and AI are opening up new avenues and transforming the way we produce. For many companies, innovation and transformation are becoming ongoing challenges that need to be supported and sustained.

UTTOP IS LOCATED IN TARBES, IN SOUTHWEST FRANCE.
SINCE 2024, IT HAS BEEN A MEMBER OF THE UT GROUP,
ALONGSIDE WITH 3 OTHER UNIVERSITIES OF TECHNOLOGIES.
